

Version 1.21 Enhancements

Interface

- Ability to right-click and customize which columns to view on most screens.
- Inventory icons denote whether assets have an outstanding logged call, completed job or letter sent to the supplier.
-  "Part-of" icon used to denote that equipment is "part-of" another piece of equipment.
- For multi site trusts, a default hospital may be assigned to a user which is utilised to automatically filter and present a subset of assets/jobs etc. for the assigned hospital.
- Additional layout, colour and menu enhancements.

Inventory

- Facility to create and view user defined screens. Create and assign user defined fields for an associated screen. The fields may consist of the following types:- character, integer, date, time, lookup (define lookup values), memo, logical and currency. Validation control may be implemented.
- Select a contract (allocated to an asset) and drill down to view all other equipment for the selected contract.
- Automatic generation of asset numbers (optional) for new equipment.

Planned Preventative Maintenance

- PPM descriptions (with attachments) may be utilised for fixed and rolling schedules.
- Ability to assign an expected completion time to a specific PPM description.
- Batch assign description facility for the above.

PPM/PAT/CAL Calendar View

- View of activity and estimated PPM completion time.
- When logging a PPM an automated email is issued to notify the relevant department that a PPM is due (optional).
- The calendar view will display PPM Interval & Type. E.g. 12 Months or 6 Weeks when a detail view is selected.

Call Logger

- Sequenced by Priority if using job priorities.
- Fast path to update equipment permanent location when a call is logged.
- Option to filter logged calls and completed calls by allocated technician.
- Batch update of job status.

Service History

- Improved log number search facility.
- Multiple technicians may be logged against the same job (optional).
- Enhanced service history audit.
- Facility for manual entry or calculated downtime value.
- Drill-down to view 'letter to supplier' letter.
- Next and previous equipment toggle buttons on service history view.
- Improved parts usage search.

Notices

- Ability to attach any PC file or Website address (URL) to a notice which facilitates the path to a paperless environment.

Reports

- Ability to view the expected versus the actual time for PPM jobs. This may be for equipment type or by individual technician.
- Drill-down to view Service History details from the work done report.
- Save and retrieve user defined report headings (optional).
- Replacement cost included on the replacement due report. This replacement cost is the most recent purchase cost for the equipment of identical type and model.

Training System

- Facility to enter course notes.
