

## Version 1.22 Enhancements

### Interface

- Job Priority Key.

	New Ultra Important
	High
	Highish Priority
	Medium Priority
	Low Priority

- Fast path for company search from the main menu.
- True context sensitive help which incorporates the  functionality.

### Maintenance

- Most recent update log for date, user and ISO 9001 flag on the companies file.
- Ability to identify a user as a technician which ensures that jobs may only be allocated to a technician.

### Inventory

- When viewing contract details it is possible to review previous contracts that the equipment was associated with.
- Ability to denote that equipment is missing .

### Planned Preventative Maintenance

- Batches may be created with a description and equipment may be allocated to a batch. If a PPM job is created for a particular batch then details for all equipment within the batch will be logged.

## PPM/PAT/CAL Calendar View

- If PPM job descriptions are utilised, the interval is displayed i.e. 6 Month or 12 Month.

## Call Logger

- A warning is issued if the equipment is on a contract when a fault is logged.
- Technicians may be allocated to and managed within technician teams.

## Service History

- Quantity value available when adding consumables.
- Service history details may be captured on Pocket PC's as well as Palms.
- PAT test files may be attached automatically to a service history entry.

## Notices

- Ability to retrieve notices by reference codes.

## Reports

- Individual reports retain previous selection criteria and data.
- Equipment Library stock report identifies the department that equipment is loaned to.
- Selected filters are highlighted for easy identification.

A & E Dept. ▼

## Equipment Barcodes

- User-defined barcodes are maintained within a template and may be printed for selected equipment or a range of equipment numbers.

## Equipment Library Module

- An estimated return date is included when booking equipment out of the department.
- The stock report now provides filters by In Stock, Loan Stock or ALL.

## **Asset Tracking Module**

- We have recently developed an asset tracking module, which may be run from within E-MAT or rolled out to wards/departments as a stand alone module.
- This module allows the tracking of equipment as it is moved between wards/departments out of hours or in situations where historically the EBME department was not notified of this movement.
- This enhanced data quality will improve the efficiency of PPM/PAT management, reducing wasted technician time searching for equipment that has been transferred to a different department.

### **CNST**

- There are also CNST implications. Due to assets being tracked and PPM's being completed in a timely manner, if there were to be a clinical incident then the asset in question will have had its relevant PPM/PAT.
- Equipment history details are available and also equipment in this department may be displayed.
