

## Version 1.33 Summary

### Maintenance

- Fast path to remove selected equipment items from a contract.
- When transferring/renewing a contract the user will be prompted to either transfer/renew all equipment on the contract or selected equipment on the contract.
- Individual equipment contract prices may be amended from the 'View Contract' and 'Select Equipment' screen.
- If the default life span for an equipment type is amended the user is prompted to update the inventory replacement due dates for associated equipment using this new default life span.
- Higher levels of Hospital. Ability to filter by individual or all sites within a hospital.

### Inventory

- Risk Model functionality allows the user to allocate a number of equipment risk scores to equipment and also configure weighting.
- In view mode, the Purchase Details screen will display the default life span from the associated equipment type.
- If a duplicate Serial Number is entered the user is prompted with a warning, the Hint on the Serial Number displays additional information about the duplicate records.

### Jobs

- A Serial Number may be entered when logging jobs for equipment that are not part of the inventory i.e. PPQ equipment etc.
- Filters are available from the Logged Calls and Completed Jobs screens to filter by Serial Number.
- If an equipment type is flagged as 'decontamination required' then a decontamination number must be entered to log a job for this equipment type. This is a feature.
- Additional security is required to log non inventory jobs.
- The 'Logged Calls' screen will automatically refresh after 5 minutes. If any additional jobs have been logged then an audio warning will be issued.

## Service History

- Multiple attachments may be added to service history jobs
- Fast path from service history list screen to view attachments.
- Additional job number formatting options – 'Xmmyy-zzz' where X is alpha numeric, mmyy- month and year and zzz is a sequential numeric reset to 1 at the start of each month.

## Planned Preventative Maintenance

- A Technician Team filter has been added to the Calendar Report.

## Stock

- Call-Off Order values may be amended.

## Reports

- Expenditure report – drill down to service history functionality a la 'Work Done' report.

## Equipment Library Module

- A Model Number filter has been added to the Equipment Library Activity Report.
- PPM due report may be filtered by risk category.
- Replacement due report may be filtered by risk category.

## Training/CNST System

- Electronic documentation may be attached to events.
- Course code and Period filters included on the Certificates screen.
- Trainees may be merged.
- The Old Training screen may be viewed in conjunction with the New Training Requirements screen.
