

## Version 1.34 Summary

### Maintenance

- Technician training authority is now linked to Staff Grade rather than individual technicians.
- When merging companies the user is prompted as to whether they wish to copy contacts and attachments to the new company.
- An information field is now available against locations and this information may be viewed by clicking the magnifying glass icon.
- For PPM Job Descriptions it is now possible to specify steps that a technician may complete as part of the PPM process, spare parts that should be replaced (mandatory and non mandatory) and any calibration equipment that must be used.
- Against model numbers it is possible to store a replacement value (and 2 new customizable fields). This replacement value is displayed on the purchase details screen.

### Inventory

- Additional inventory filters are available for the following fields:-
  1. Organisation – Filter by PCT etc.
  2. Asset Detail – Filter by 'leased equipment' etc.
  3. Product Code
  4. Location

### Jobs

- Tolerance periods. When a fault is logged and the PPM date is within a predefined configurable period (e.g. 1 month for a 12 month PPM), the job is also notified as being PPM applicable.
- Logged Calls. When utilising job priorities the user may choose to sequence the logged calls screen by log number.

### Service History

- Service History Completion Fast Path. Facility to allow technicians to notify PPM completion stages, parts and calibration equipment by confirmation of check box list. This leads to improved data quality and vastly increased data entry speeds.
- Enhanced Service History layout.
