

Version 1.42 Summary

New Features

Inventory

Inventory screen

- User can Right Click to set on "Multi-select" option, option is saved as a User Setting. Multi-select can be used to batch scrap (Ref: F0103987)
- PPM, EST and Calibration columns available on the Inventory screen (Ref: F0093771)
- Additional Warning prompts/checks on "Batch" Scrap Button/Function (Ref: F0106901)

Inventory Details

- Supplier Default – when adding new Inventory items the manufacturer will default to the supplier value if not entered (Ref: F0093771)
- When adding/editing Inventory Details/attachments (when based on a Word Template) a default name will be given to the attachment based on the template name which can be revised by the user (Ref: F0093771)
- Add New Risk "Risk Use" and "Risk Maintenance" Section to Risk Tab, configurable via "Risk Use" option in Features (see Options section) (Ref: F0099205)
- Include comments and attachments against equipment type and model numbers (Ref: F0099211)
- Maintenance Fast Path (buttons) for common details eg Supplier, Department, Equipment Type etc (PDG)
- Update/Renumber Inventory Equipment Number button (PDG)
- New Last Seen Date Field (PDG)
 - Auto populated on upgrading to 14.2, Auto updated as Service History is recorded, can be switched off for selected Job Outcomes (On by default).

Jobs

- When viewing job details a "fast path" (button) to the edit facility is available (Ref: F0100229)
- When logging a job or editing a job the user can now amend the Job Type (Ref: F0100229)
- When selecting equipment for a job from the Equipment List, the selected equipment is now shown in a grid in the lower part of the Equipment Selection form.
- Batch jobs – warnings will be displayed when creating batch jobs of more than 200 items (figure is configurable Please contact us at barwick.support@ascribe.com if you would like this setting to be amended). (Ref: F0103987)
- Job Allocations are now audited (Ref: F0100229)
- Call Logger Speed Enhancements - PDG
 1. Equipment Selection Screen now uses the new (main) Hospital Filter
 2. The cursor position now defaults to the equipment number or contact if a batch job
 3. On selecting Equipment via the lookup the cursor will auto jump to the next appropriate field
 4. On leaving the Equipment No the cursor now jumps to the Contact Details
 5. When logging a call if the equipment is under contract but no contract is selected the User is warned and taken to the Contracts Tab
 6. When logging a call if the equipment is under Warranty the user is warned.
 7. The Cancel button will now exit the Call Logger (if there are no details to Cancel).
- User allowed to minimise the logged calls screen (Ref: F0093771)

Service History

- Main Job Outcome – This field is now configurable as mandatory (or not). Please contact us at barwick.support@ascribe.com if you would like this setting to be amended (Ref: F0103987)
- Entering Service History for Batches- User can Right Click to add items to batch (Ref: F0103987)
- When entering stock for an External Part (EP) the user can enter a description, the description will be displayed with the part. (Ref: F0103987)
- Serial number added to header section and Common phrases can be multi-selected (Ref: F0093771)
- Display ALL for Parts (Ref: F0088817)

Users can now view parts not associated with any models or all parts regardless of model when entering service history

- Add Contact Details to Service History (Ref: F0115231)
- Remove facility to minimise service history (Ref: F0093771)

Contracts

- Contracts – Only companies with contracts displayed in drop-down/lookup lists. (Ref: F0100238)
- Double clicking from the contract list view will display the contract (Ref: F0100238)
- Facility to edit equipment start and end dates via the cost button and ability to edit cost code, cost centre and asset detail (Ref: F0100238)
- Equipment view – resizable columns (Ref: F0100238)
- When viewing equipment details, an assign button is available to add additional items (Ref: F0100238)
- Batch population of Model costs in contract (Ref: F0100238)
- A button will be added within the Model Costs Screen 'Auto-populate' which will have a hint of 'Auto-populate Models within the contract' which will create a record within the list for each model for each item that is currently attached to the contract (that do not already exist in the list). This will be unique and the default value will be set to zero. These default values must be amended/removed to a non zero value prior to closing this screen. (Ref: F0100238)
- A new edit model cost icon button will also be available. (Ref: F0100238)
- Renewed contracts will be automatically closed after a predefined period (expired and non-renewed contracts will remain open for manual closure) (Ref: F0100238)

Planned Preventative Maintenance

PPM Printing - When raising a PPM job from PPM Management the user will have the option of printing the job sheet

Reports

- Equipment Type Wildcard Search added to Inventory Report (Ref: F093773)
- Work Done Report - Speed improvements, Mileage, Date/Time Call Received, Completed, Location and 1st Allocated Columns added (Ref: F0103987)
- Model number filter included on the following screens, reports: Jobs > Logged Calls, PPM > PPM Due, Scrap > Inventory View, Reports> Work Done, Financial and Expenditure (Ref: F0093771)
- Next Due PPM added to Inventory Report (Ref: F0093771)
- New Report - Work Done Report by Technician (Ref: F0093778)
- Replacement Report – Estimated Replacement Option - PDG

General

- Hospital Filter (Ref: F0093775)
Users can now be linked more than one hospital/site and Hospital Filters will now reflect that selection by default with the ability to override the selection on individual screens/reports.
- Export to Excel Template (PDG)
Most (eventually all) screens with an Excel export option now have the ability to export to an existing Excel "Template" File.
A Template file being a normal Excel workbook containing at least one Sheet, which is named "EMAT Data" into which E-MAT will export the data.
The workbook can contain as many other sheets as the user requires, which can link to and perform calculations, produce charts etc based on that data.
- Auto attach inventory/job/contract attachments (PDG)
Documents placed in the "Auto Attach" sub folder of the Inventory, Contracts or Job Sheets (aka Service History) Attachments folders will now be auto attached to the relevant Equipment, Contract or Job/Service History. If the sub-folder does not already exist when the process looks for files it will be created automatically.
The process occurs once each day when the first user logs in, you can start the process manually at any time from the Tools Menu.

Maintenance

- Added "Risk Use" and "Risk Maintenance" Maintenance pages the Maintenance section (Ref: F0099205)
- Maintenance Fast Path for details eg Department Names added to Departments Page (PDG)
- Added "Not Seen" flag to Job Outcomes Page (Off by Default). (PDG)
 - If Switched Off then Jobs with this (Main) Outcome WILL update the Inventory LastSeenDate Date
 - If Switched On then Jobs with this (Main) Outcome will NOT update the Inventory LastSeenDate Date.

BUG Fixes

- Cancelling a job failing to restore parts (Ref: F0116768)
- When completing Service History for a batch job the Fixed Scheduling check box is overlaying the select/edit button (Ref: F0116770)
- Batches - completion and 1st allocated date and time are blank.(Ref: F0116771)
- Stock view/edit repositioning error (Ref: F0116773)
- Show inactive maintenance filters (Ref: F0101773)
- Asset Detail Drop Down List in Inventory Filters showing inactive Types (Ref: F0108835)
- Fixed Scheduling flag not recorded/restored to/from Scrap (Ref: F0112860)
- Cannot remove future Items from a contract (Ref: F0112867)
- Error Message "A Component named formInvDet already exists" (Ref: F0113324)
- Excel: Long text exported as ##### (Ref: F0114240)
- Excel: Repeated rows at the end of an Export (Ref: F0118738)
- INI File Read problem affecting (ad - hoc) SQL option (Ref: F0108304)
- "Below Stock Level" warning appearing once for item that takes the stock below the minimum (Ref: F0125522)
- About Dialog pops up at desktop centre rather than screen or owner form centre - only seen if you have more than one screen (Ref: F0125516)
- Job Status Maintenance: Cannot de-activate a status if the Letter prompt is still checked.(Ref: F0125519)
- PPM Job Description button not showing on the Inventory Details tab (for Rolling Scheduled equipment) (Ref: F0118080)
- Record Lock Error when partial saving a Batch Job with Parts/Equipment (Ref: F0119524)

Training Module :-

- Intermittent failure to print certificate (Ref: F0101725)
- Department Filter refresh bug (Ref: F0108714)
- Course code lookup not filling in fields on New Event form (Ref: F0108724)

Import Module:-

- Database connection error message when using Import utility via EMATImport.exe (Ref: F0117326)

PDA :-

- Display issues with new PDA (Ref: F0115498)
